

We are looking for a skilled and enthusiastic Software Engineer to help us to further develop our systems and help our customers by creating tools for better VOD delivery.

ABOUT THE POSITION

We are a small tight team which run the operation and we are now looking for another multi-skilled ninja. As a Devops you help us improve the workflow and setup integrations with our customers systems. You will also be working with the systems that are in production mode, to make sure they perform well 24x7.

We try to use the best technology for the solution instead of saying that all has to be .net or always use the cloud.

Therefore you will come across an number of different tech. We run large storage and processing large files as well as light rest APIs

EXPERIENCE

You are a multi-skilled and service minded person with interested in cutting edge technology. Desired background / Experience:

- Backend .Net developer (essential)
- Experience of managing windows and Linux servers (essential)
- Experience of “Continuous Integration” CI-systems (essential)
- Experience of Cloud servers and storage like AWS, GCP, Azure
- Experience of network administration
- Experience of video transcoding, ffmpeg, Mp4Box, Elemental
- Experience of documenting systems for support team
- Experience of work with streaming media.
- Good levels of communication. Both written and verbal in English

TECH SKILLS

- C# development in Visual Studio (essential)
- Rest/Graph
- Windows server administration (essential)
- MS SQL / MySql server administration (essential)
- FTP server administration (essential)
- IIS Web server administration (essential)
- Backup administration (essential)
- Network administration (essential)
- AWS administration.
- Logstash/Kibana, Splunk
- Terraform scripting
- Streaming video, CDN (content distribution network)
- DRM technology for video on demand
- Administration of monitoring systems.

PERSONALITY

- Enthusiasm and an interest in all things technology
- Multi-skilled with “I can do attitude”
- Service minded problem solver
- Able to work independently and efficiently to meet deadlines.

- Self motivated, detail-oriented and organized.
- Able to work in a fast paced environment, with rapidly changing requirements.

TASKS

- As a member of the Upstream team:
 - Identify the solutions to ours challenges.
 - Plan development sprints
 - Develop application
 - Run demos
 - Run test in staging
 - Deploy and verify features production
- Work with the DownStream team (Support) to resolve issues.
- Set up infrastructure for our products in cloud based hosting or in Co-locations.
- Set up and maintain CI systems.
- Monitor and maintain the systems performance.
- Deploy new versions to the production server.
- Developing customer-facing documentation for our website on an as-needed basis.
- Maintain technical and project documentation.
- Answering questions from customers about the features and capabilities of our products and services.
